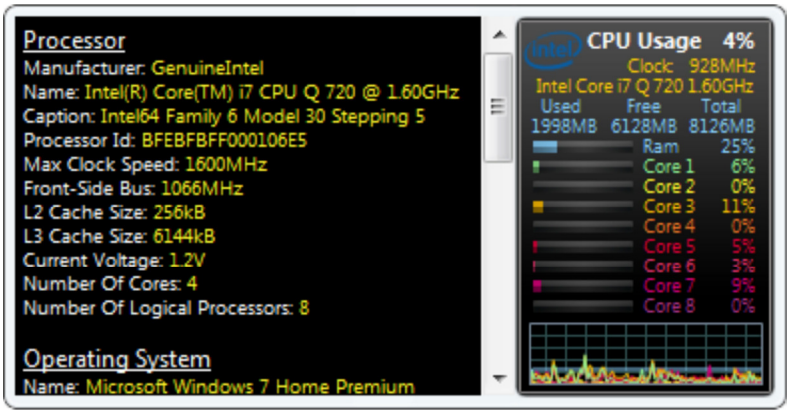
All CPU Meter



Like 2k
3k

With this All CPU Meter Gadget you can display your total of processor usage in percentage, processor clock speed, name of processor, display all core of processor usage in percentage and with different color. Support up to 24 cores there is included twenty four cores, sixteen cores, twelve cores, eight cores, six cores, quad cores, triple cores, dual core and single core. For the processor cores temperatures you have to running the CoreTemp application in background to show the temperatures. For the RAM (Random Access Memory) it can display your used, free, total usage in MB (megabyte) and also total usage in bar and percentage. For the graph it can display all core of processor usage and RAM usage by drawing style in line or filled.
For the flyout features you have to click on the icon (Intel, AMD or CPU) or title to show the information. There are a lot of information included processor (manufacturer, name of processor, Caption, processor Id, max clock speed, front-side bus, L2 cache size, L3 cache size, current voltage, number of cores and number of logical processors), operating system (name of OS, CSD version, OS version, serial number, install date, last boot up time, number of processes, number of users and OS architecture), Base Board (manufacturer, product and serial number), BIOS (name of BIOS, manufacturer, BIOS version, release date and serial number) and Computer System(manufacturer, model and system type).

Features

- Processor usage
- Ram usage
- Size Adjustable
- CPU Frequency
- Double Click On Background Show
  Task Manager
  Resoure Monitor
- Refresh Rate Adjustable

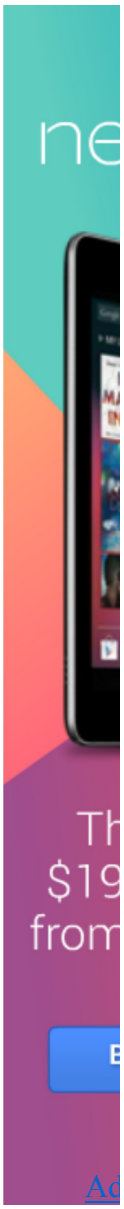
All CPU Meter Version 3.9 Download Now (.zip)

Release history
Version: 4.0.5 - Fixed AMD Phenom and Opteron processors temperature sensor.
- Fixed temperature values to integers.
Version: 4.0.4 - Fixed refresh issues.
Version: 4.0.3 - Fixed bugs.
Version: 4.0.2 - Fixed bugs.
Version: 4.0.1 - Fixed 32 threads bug.
Version: 4.0 - Added support dual processor motherboard up to 16 cores and 32 threads
- Added support PC Meter
- Added sound alert CPU temperature*
- Added Intel processor turbo frequency*
- Remove support CoreTemp
- Changed Intel logo
- Changed some of text and bar color



Version: 3.9 - Fixed setting can't save.
Version: 3.8 - Fixed bugs and added copy text function on flyout.
Version: 3.7 - Fixed bugs and added many info on flyout (Processor, Operating System, Base Board, BIOS and Computer System).
Version: 3.6 - Fixed bugs.
Version: 3.5 - Fixed memory leaks IE9 RTM, improvements and added new settings futures.
Version: 3.4 - Fixed memory leaks IE9 RC (remove CPU frequency).
Version: 3.3 - Fixed internet explorer 9 beta bug.
Version: 3.2 - Fixed bug, added support for Twenty Four Core and more setting.
Version: 3.1 - Fixed bug and added color changeable for (each core, graph, ram, clock and font).
Version: 3.0 - Added CPU frequency, Processor icons, Processor name, Background and Cores temperatures*.
Version: 2.6 - Fixed bug and added interval.
Version: 2.5 - Fixed AVG problem.
Version: 2.4 - Added support for Six Core and fixed bug.
Version: 2.3 - Fixed update notifier and fixed bug.
Version: 2.2 - Added support for Sixteen Core and Twelve Core Processor.
Version: 2.1 - Fixed bug.
Version: 2.0 - Added size adjustable.
Version: 1.3 - Fixed bug and added Single Core.
Version: 1.2 - Fixed bug and added auto update notification.
Version: 1.1 - Added support for Eight Core and Triple Core Processor.
